

Select the object whose records trigger the flow when they're created, updated, or deleted.

* Object

Quote

Configure Trigger

Trigger the Flow When:

- ☐ A record is created
- ☐ A record is updated
- ☒ A record is created or updated
- ☐ A record is deleted

Set Entry Conditions

Specify entry conditions to reduce the number of records that trigger the flow and the number of times the flow is executed. Minimizing unnecessary flow executions helps to conserve your org's resources.

If you create a flow that's triggered when a record is updated, we recommend first defining entry conditions. Then select the **Only when a record is updated to meet the condition requirements** option for When to Run the Flow for Updated Records.

Condition Requirements

All Conditions Are Met (AND)

	Field	Operator	Value	
	# Discount	Greater Than or Equal	15	 
AND	Approval Status	Does Not Equal	Pending Approval	 
+ Add Condition				

When to Run the Flow for Updated Records ⓘ

- ☒ Every time a record is updated and meets the condition requirements
- ☐ Only when a record is updated to meet the condition requirements

Update Records

* Label

Update Approval Status

* API Name 

Update_Approval_Status

Description

* How to Find Records to Update and Set Their Values

- ☒ Use the quote record that triggered the flow
- ☐ Update records related to the quote record that triggered the flow
- ☐ Use the IDs and all field values from a record or record collection
- ☐ Specify conditions to identify records, and set fields individually
